***Abstract_** This study aimed at adapting and validating an Arabic version of Passionate Love Scale which was developed by Hatfield and Sprecher (1986). Data were collected from (1026) male and female undergraduate students from all colleges and academic levels at Tafila Technical University in the academic year 2013/2014. Validity was checked using concurrent criterion validity and construct validity. The results of factor analysis identified one major factor. Reliability was checked using internal consistency (cornbach α) and test- retest methods. It has been found that these coefficients were significant.*

***Keywords:** Passionate Love Scale, Validity, Reliability, Psychometric Characteristics.*
