***Abstract** \_The study aims to identify the degree of Employing Electronic Management in Some Administrative Processes in Basic Schools in the Sultanate of Oman, and explore the study variables' (gender and technological experience) effect on that reality. The researchers used a questionnaire as the study instrument. It included (69) items, distributed on three sections. One of the main findings of the study was that employing e-management in its three fields has come at a medium level. There was no statistical significant differences at ( $\alpha=0.05$ ) in the degree of employing e-management in administrative processes due to gender in the three study fields. In addition, there was no statistical significant differences due to technological experience in both organization and evaluation fields. However, statistical significant differences were found for this variable in the planning field in favor of (more than 10 years) category.*

***Key words:** Management, electronic management, operations management, basic education.*
