***ABSTRACT\_** This study aimed at identifying the problems that face the students of the Northern Borders University, and their guiding requirements , and the effect of each variable (gender, faculty type, educational level, family's economic level, The current academic level of achievement) on these problems. To achieve this goal, a questionnaire consisting of (35) paragraphs distributed to five aspects (The academic field, the psychological sphere, the social sphere, the economic sphere, the field of activities and services) and is applied on a Random sample consisting of (1400) student And who represent 10% of the study population. The study has revealed that the problems of the students were frequent as follows: (the social sphere, then the economic sphere, then the psychological sphere, followed by the field of activities and services and finally the academic field. The study has also shown statistically significant differences at the level (0. 05= a) to the studying level variable for first year students in the academic problems. In addition to statistically significant differences to the economic level variable on the academic problems for the benefit of low-level students. The study showed that there were no statistically significant differences at the level of (0. 05= a) In the level of problems experienced by students in the psychological field, the social sphere, the economic sphere and the field of activities and services due to the variable of (gender, faculty type, educational level, family's economic level). Generally, the study has shown that the students of the Northern Borders University do suffer from problems in different aspects according to the different variables of the study, and they need Counseling services, the researchers also recommended the need to generalize the Counseling services to On university students in various departments and colleges and on various fields.*
