ABSTRACT: *This study aimed to identify the different teachers' opinions concerning their application to the active methods in the geography's teaching at the university as it is in Hassan II University in great Casablanca. The study included sample of 24 teachers; it has been used descriptive method to determine the statistical discrepancies in terms of the teachers' views based on: sex variables, years of experience and diplomas obtained.*

The study showed that the university teachers of geography could respect various steps in applying the active ways in the field of Geography. However, the multiple difficulties experienced in the Geography branch, prevented neither regaining these methods nor the applying the measures proposed by the State to develop the teaching of geography at the University. Therefore assumes the configuration and the configuration of university teachers, motivate and physically and morally and processing the university in all modern technologies.
