**Abstract\_** *The study aims to identify the scope of the awareness of students of the College of Education, Taibah University Branch in Yanbu about environmental concepts and problems associated with them and comparison of the level of awareness among students, who are inhabitants of the Industrial City of Yanbu and Yanbu Al-Bahr.*

*The results showed that students in both the Industrial City of Yanbu and Yanbu Al-Bahr are aware of the existence of air pollution and that it has an impact on the health of the individual and society at the same level, noting the higher level of pollution in respect of those who live in the Industrial City of Yanbu, whose family members have allergy symptoms, which shows the presence of relative air pollution in the Industrial City. It also turned out that they have a higher willingness to participate in the environmental awareness program. On the other hand air pollution due to unpleasant odor is sometimes observed among students who dwell in Yanbu Al-Bahr different from those who live in the Industrial City of Yanbu.*

*As for the programs that are offered in the field of environmental preservation, views of students in both cities have agreed that they need to be simpler and clearer. It also turned out that both groups have ideological connection with the guidance of Islam to preserve the environment.*

**KEY WORDS:** *Environmental awareness, Girls, Faculty of Education, Pollution.*
