

QUALITY OF LIFE AS A PREDICTOR OF MOTIVATION FOR LEARNING AMONG A SAMPLE OF STUDENTS AT EL-OUED UNIVERSITY

ALZOHRA ALI LASSOUED*

ABSTRACT_ *The objective of the present study aimed at measuring the quality of life and motivation for learning among the students of El-Oued University and the linkage between them. Is it possible to predict the motivation for learning through quality of life?, The study followed the descriptive approach. The sample consisted of (80) students who have been selected according to their class manner. The study has found that there is a high level in both quality of life and motivation for learning among university students. The results also have showed a statistically significant correlation between quality of life and motivation for learning, and that motivation for learning through quality of life can be predicted. The study recommended the adoption of university counselors who are working to improve the quality of psychological life, and to encourage motivation for learning among university students.*
